Testing Monefy mobile application (Android)

App Version: 1.16.0 Android Version: 11

Device: Xiaomi Poco F3

BUG	BUG definition						
BUG	BUG #1 - Money amount textbox should be reset after selecting a calculation operand (Test case #14)						
#	Step						
1	Press on income button on homepage						
2	Type 100						
3	Press +						
4	Press =						
5	It then displays 200						
6	Press +						
7	Press =						
8	It then displays 400						

Apparently the function parameter after the operand is taken from the textbox, and is applied after pressing "=". So this textbox should reset its value and ask for the second number from the user.

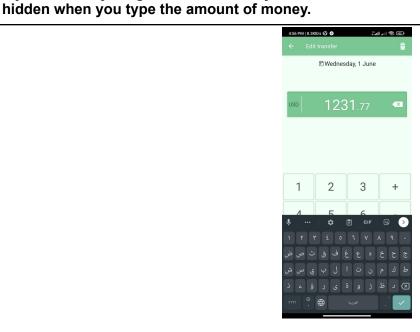

Severity	Minor
Priority	Low

BUG definition							
BUG #2 - Pressing delete button on the money amount textbox after performing any calculation which yields result with decimals only leaves the far left number ( <b>Test case #15</b> )							
#	Step						
1	Press on income button on homepage						
2	Type 100						
3	Press /						
4	Type 3						
5	Press =						
6	It then displays 33.33						
7	Press delete button on the right of the money amount textbox						
8	It then displays 3						

You can try it with any other number like 200\7 which is equal to 28.57 and press delete, it will only display 2. It should remove the far right number which in this case is "7" and display the number "28.5", or at least delete all the number but this is a bad user experience.

Severity	Major			
Priority	Medium			

## **BUG** definition BUG #3 - Pressing the money amount textbox after adding note doesn't collapse the mobile keyboard (Test case #21) # Step 1 Press on the 2 reversed arrows on the header 2 Choose from "Cash" 3 Choose to "Payment Card" Press on "Note" textbox 4 5 Press on the money amount textbox The mobile keyboard should disappear and show the numeric keyboard. Instead, the mobile keyboard does not disappear and the numeric keyboard is displayed under it. 7 If you write anything on the mobile keyboard it is written in the note, but you do not get to see it as it is

Severity	LOW
Priority	Medium

BUG definition							
BUG #4 - Exported .csv file does not support notes written in arabic							
#	Step						
1	Add any income or expense or make any transfer						
2	Press on the three vertical dots on the right of the header						
3	Press on "Settings"						
4	Press "Export to file"						
5	Choose the export location						
6	Open the file

## **UX Recommendations**

Add tooltip for buttons to clarify what they do:

- Header left button
- Show details button in the slide
